Introduction:

Eco-the travel industry is one of the quickest developing sections of the Sustainable the travel industry, which centers around untamed life preservation, ecological assurance, destitution easing and monetary advancement. Eco-the travel industry additionally called Sustainable the travel industry can be characterized by an assortment of movement rehearses, yet everything boils down to general arrangement of thoughts. Also, ecotourism is a piece of natural preservation, and understanding what the requirements of the individuals are who are neighborhood to the zone with the goal that you can improve their personal satisfaction.

Ecotourism is a sub-segment of the field of supportable the travel industry. Ecotourism's apparent potential as a viable device for maintainable improvement is the primary motivation behind why creating nations are currently grasping it and remembering it for their monetary advancement and preservation techniques. Ecotourism, as an elective the travel industry, includes visiting normal territories so as to learn, to think about, or to complete exercises naturally well disposed, that is, a travel industry dependent on the nature experience, which empowers the financial and social advancement of nearby networks. It centers fundamentally around encountering and finding out about nature, its scene, verdure, fauna and their living spaces, just as social antiques from the region. An advantageous and complex connection between nature and traveler exercises is conceivable when this way of thinking can be converted into suitable approach, cautious arranging and prudent practicum. Deliberately arranged and worked ecotourism destinations, particularly on the off chance that it is town based and incorporates neighborhood support, can give direct advantages that may balance pressure from different less reasonable exercises that utilize common and social assets. Eco the travel industry, normal assets, social legacy, country way of life and an incorporated the travel industry is a sort of neighborhood monetary exercises. In this way, ecotourism in normal and social regions was done with various components in their regular scene and social scene (water, vista, geology, vegetation, clean air), just as in the assortment of recreational exercises

appropriate for a wide range of conditions. Along these lines, ecotourism and its common resources and crude materials to make, just as guiding individuals to travel is an attractive force.

Review of Literature:

According to United Nations' definition (in Bromberek 2009, 3) sustainable (tourism) development "- meets the needs of the present without compromising the ability of future generations to meet their own needs." This definition encapsulates the core idea of sustainable development, which is to make use of the available resources while they are preserved for the future generations as well. This definition seals in the idea of generosity and mindfulness, suggesting a radical change in one's way of thinking. Instead of greediness and ignorance the trend is to consider the needs of people around without forgetting the environment. Bromberek (2009, 3) also suggests that sustainability is more of an attitude and new worldview where the core challenge is to find a balance between the aesthetic and environmental needs of a project, as well as between tangible and intangible threats and opportunities and to secure increasingly scarce resources for future generations.

Sustainability covers three essential aspects that must be considered: social, economic and ecological sustainability. Edgell (2006, 4) takes into consideration all the three aspects by stating that sustainable tourism is quality growth managed in a way that does not damage the natural nor the built environment but also preserves the culture, history and heritage of local people. For sustainable practices being implemented purposefully all the three must be taken care of. In the Figure 1 the upper part, sustainable tourism, is displayed as an umbrella covering all the sub categories of social, economic and ecological approaches. The lowest sub category displays different forms of tourism and indicates that all of them demonstrate social, economic and ecological aspects.

Objectives of the study:

1. To identify and develop natural areas, as ecotourism destinations, promotion of eco-friendly infrastructure facilities.
2. To evaluate positive and negative impacts on eco-tourism development in Sivgangai.
3. To reduce the negative impacts of eco-tourism in Sivgangai.
4. To promote nature conservation through education, creating awareness and enhance visitor learning experience for conservation.

Research Methodology

The data fully collected as a Secondary data

Secondary data regarding the basic aspect of the study area is been collected with varied cultural and physical statistics from Tourist Office.

Eco-tourism and Sustainable Development:

The sivagangai, arranged in the southern piece of Tamilnadu the Indian Peninsula has more than 20 centuries of social legacy and notable criticalness. The preeminent of attractions in the

state are its noteworthy sanctuaries, which are genuine structures of an incredible and antiquated culture energetic and vivacious even today. Next just to the journey and legacy areas in Tamil Nadu comes the grand excellence of nature in and around the state as woods, untamed life asylums, slope stations and the long bio-different coastline. These areas give gigantic chances to touring, delight and relaxation, to the guests of different classifications including experience voyagers.

Ecotourism is touted as a fruitful device for advancing feasible financial practices in creating countries, and for empowering ecological Conservation around the world. The core value of maintainable improvement is to address the issues and goals of an area's present age of individuals without bargaining those of people in the future. Maintainable improvement arrangements additionally try to create monetary frameworks that run with practically zero net utilization of common assets, and that evade natural harm. Ecotourism, as other fruitful maintainable improvement systems, gives a solid monetary motivation to secure characteristic assets. Economies that rely upon ecotourism dollars have an undeniable enthusiasm for safeguarding the characteristic and culture includes that these novice naturalists and travelers pay to see. Besides, the ecological effects and asset needs of ecotourism, which incorporate advancement of trail frameworks and access streets, utilization of fuel and vehicles for transportation to and from the wild, and foundation of campgrounds, are insignificant, particularly when contrasted with the Land use rehearses that business nature travel regularly replaces. At long last, the firsthand experience of going in the wild, of watching common unpredictability, and of thinking about the delicacy of biological systems worried by human uses frequently gives eco travelers and their neighborhood manages another viewpoint on the estimation of natural protection and asset preservation.Positive Impacts of eco-tourism

Eco tourists gain knowledge of eco systems, biology and geology of specific natural locations, which in turn informs their conservation, efforts. Some of the money that goes into eco tourism also goes to conservation efforts, such as repopulating endangered species and reforestation.

It helps the environment by reducing the amount of pollution that enters the soil, water and air. By using alternative energy sources and avoiding the burning of fossil fuels, recycling and reducing waste and driving more efficiently, fewer pollutants are released into the environment.

Negative impacts of eco-tourism

Damage to the landscape: litter, erosion, fires, disturbance to livestock, vandalism. Traffic congestion and pollution. Local goods can become expensive because tourist will pay more. Shops stock products for tourists and not everyday goods needed by locals.

Findings and Suggestions:

The suggestions mentioned were more services better infrastructure. Even if there are already more hotels and restaurants for tourists, still there need more establishments and also improving their infrastructure was recommended in order to facilitate not only the tourists but also the locals mobility and accessibility to the touristic areas. This is directly addressed to the government who is responsible for building and maintains the basic infrastructure such as roads and bridges and also better planning and organizing. The lack of planning and management skills is preventing them of making the most of the tourist’s visits. Due to the positive impacts of

eco tourism it increase the environmental education and awareness, Conservational of natural resources, Improve environmental quality, and preservation of water resources and to prevent the soil erosion and landslide.

Conclusion:

Eco-tourism has been defined as a form of nature based tourism. It involves travel to destinations where rich natural flora, fauna and cultural heritage are the main attractions. The present study of Sivgangai districts offers the calmness with great potentialities of promoting ecotourism. It is evaluated the positive and negative impacts of ecotourism development in Sivgangai and to evaluate the environmental, economic and socio-cultural impacts of eco-tourism development in Sivgangai. This study reveals that environmental quality in terms of conserve natural resources, improving environmental quality in sivagangai achieving good status. In terms of tourist perception on economic activity such as generating job opportunity, revenue for the local government. In contrast to that seasonality of income and employment and concentrate only tourism based economic activities are identified as the major negative impacts on economic activity and assigned high negative value. The study finally concluded that there will be a good scope for enhance sivagangai as an ecotourism destination for Sustainable tourism development.
