Giant Pandas: The Necessity To Protect Against Extinction

Have you ever appeared to be at a zoo furthermore examine those charming adorable black and white animals which are happened to be endangered? Giant pandas are bears native to China and considered a nation's treasure. In the wilderness, these adorable pandas are found only in the remote areas, such as in the mountains regions. The giant panda has a greedy desire for bamboo. A typical animal eats half the day—a 12 out of every 24 hours—moreover discharges itself dozens of occasions a day. Endangered pandas remain a problem in today's civilization, however, among help of others, the lives of the endangered pandas may be spared.

Giant pandas remain very charming yet what are these feature that addresses these pandas extremely adorable as well as what does it do to tune you into its music and make you watch him while drooling? These pandas are beautiful with yin and yang colors. These pandas have round stocky heads with a short tails which makes it eye appealing. Although you may believe that these poor pandas don't possess any way to defend themselves and seem helpless, these guys have large sagittal crusts which give them the skills to grind through very firm stuff with there jaws. They have eye-capturing colors round there eyes like football players although it’s all around their eye and the color is black. These pandas are very chubby and heavy and weigh a whopping 220 pounds and happen to eat 20-40 pounds a day and their diet is only trusty bamboos. They are only 1.2-1.8 meters. Mating is crucial for giant pandas and it occurs in the months of march-to-may. These pandas sadly only live for 10-15 years. There common behaviors you probably saw are that they are nocturnal, solitary, motile, crepuscular. Whoa sure look spectacular due to their reasons which are of course their features and they certainly do a lot (eating only) throughout their day.

If these pandas are spectacular or amazing creatures then they would need a perfect habitat, also are these pandas having so far a good status or are they really safe? These pandas are native to China and live in the southeastern area and neighbors Myanmar and Northern Vietnam. Due to this world of expanding the population, there are only 20 isolated habitats. They are usually around the mountainous regions such as Sichuan, Shaanxi and Gansu provinces. They have once in the lowland areas, but farming, forest clearing, and other development now restrict giant pandas to the mountains. Giant pandas status is increasing population although Giant pandas are listed as in the red list of the threatened zone. They have had a 17% increase in population since 2014 and now an astonishing 1,864 giant pandas left in this world. These poor confined pandas live only in 20 isolated habitats with a decent status, so we better give them hope due to the small amount of area they get to live with.

What efforts can we do to save these beautiful creatures? Giant pandas don’t want to reproduce so they have an alternative which is an artificial insemination which would help to increase the population. The Chinese government has also agreed to develop bamboo corridors to link pockets of forest, allowing the pandas within them to move to new areas, find more food and meet more potential breeding mates. They are also planning on creating more reserves and expanding the number of habitats. We can also help by monitoring their day and night looking out if anything happens. We may also protect their bamboo because it’s there primary food. Although these are only a few ways to help these pandas it could boom their population and each person that does decide to help plays a big role in saving these pandas.

Pandas are cute and spectacular but they are considered endangered (vulnerable) but someone will need to defend them and we may spare there specious if we can offer them our help. These giant pandas are white and black they have a short tail and stock heads. They have only 20 isolated habitats and live in mountainous regions. To increase their population we have to make pandas reproduce and if they don’t want to reproduce then we can use artificial insemination and expand their territory. So, in conclusion, we need to care and give more importance towards them because if all of us don’t give their specious hope to save them then there hope jar is broken and we are the only people to rebuild that jar to regain their popularity and boot them out of the endangered zone.
