# Ocean Pollution: Struggle Of Marine Life For Survival

Animals live for different amounts of time, but when they are in the water they think rubbish is food they eat it and stop breathing , die or get injured. It’s time for us to take responsibility and take action to help out our lives are in danger each marine life. Our marine animals are struggling everyday and need help living. The incorrect disposal of human resources poses as a threat towards marine life. The impact of human disposals endangers the marine environment. Marine lives and habitats are at risk. The choices we make, change the habitats of marine life.

According to https://www.tentree.com/blogs/posts/10-benefits-of-cleaning-up-your-local-beach There are great benefits to having a clean ocean such as:

- It can save marine life from dying
- You won’t have to sit on rubbish on the beach if it’s clean
- You will be more safe
- seafood is safe to eat

Research says, if you have a safe and clean beach it will provide clean water for the animals to live in. Marine life struggles to live each day and need our help making it better.

According to, https://www.reusethisbag.com/ protecting the planet can lead to cleaner air, water and soil. It can also make people happier when the environment is clean and making the animals healthy. Each year two times more rubbish is dumped into the ocean as the weight of the fish is caught. https://blueocean.net/ says in 2020 Western Africa has planned to be plastic free, they are doing that to keep the environment clean and the animals safe.

Firstly, http://oceancrusaders.org/plastic-crusades/plastic-statistics/ about 100,000 marine animals die each year from rubbish being in the water, people need to take responsibility for where they put their rubbish and they need to be aware of how it can affect the animals. Animals get confused on the difference between food and rubbish they go to eat the rubbish and the rubbish ends up getting stuck around their mouth, throat or body. Way too many animals die each year from just being affected by pollution, it's devastating to see animals dying from trash that should not be around them. Animals aren’t ready to die or get hurt. Research says Rubbish shouldn’t have to affect animals habitats and it shouldn’t have to impact anyone’s life. Everyone needs to keep the animals safe so then they can live longer.

It’s impacting animals lives and impacting the way they are living. According to https://www.wwf.org.uk/updates/how-does-plastic-end-ocean

Rubbish ends up in the ocean from people putting trash in the wrong spot, it goes through a process to get in the ocean, but it could also be different reasons why its ends up in the ocean. People litter, they put their rubbish in the recycling bin, it could also end up straight in the ocean. Trash can take up to 20 years to rot, and take plastic bottles 450 years. When it’s raining and there is rubbish around the sewers it could go into the sewers and then it makes its way into the ocean and it will affect the animals.

According to research, Animals are dying and people need to take responsibility and help the sea life. People need to take care of marine life many animals die a year from being polluted by trash being dumped into the ocean. Picking up rubbish from the side of the road is just taking action and helping out because if you just leave that on the side of the road, chances are it will end up in the ocean. Picking up rubbish from the beach would be a great idea to help out with the marine life because when the wind blows or there is lots of rain it will get blown into the ocean and it will be unsafe for marine life.

According to, https://edition.cnn.com/2015/09/17/world/oceans-report/index.html in 40 years we have lost nearly half of marine life, that just goes to show that the marine life aren't safe living in the ocean and need to have and live a better life.

About 13,000-15,000 pieces of plastic are dumped into the ocean every day, according to research, this is too much rubbish dumped into the ocean a day. https://www.reusethisbag.com/ says, each year 2 times more trash is dumped into the ocean as the weight of the fish that is caught. In 2020 Western Africa have planned to be plastic free to help the animals and the environment. In 2025 $1 billion will be spent to reduce the plastic In the ocean in Indonesia to help with the animals. Protecting the planet can be a result of clean air, water and soil. ( Blue ocean)

In conclusion, marine life struggle to live each day and need help living, it's time for everyone to think about where they put their rubbish so then they don't get killed. People need to take responsibility and take care of the animals and make sure they are in a safe environment.
